EXPERIMENT 11

Comparative Analysis of Zero-shot, One-shot and Few-shot Prompting

Name	K Lokesh
Register Number	192472020

AIM

To compare zero-shot, one-shot, and few-shot prompting approaches using sample responses for the same topic.

PROCEDURE

1. Choose a common task: explain Artificial Intelligence.
2. Prepare a zero-shot prompt without examples.
3. Prepare a one-shot prompt with one example.
4. Prepare a few-shot prompt with multiple examples.
5. Display the sample response for each prompting method.
6. Compare the methods based on examples used, relevance, clarity, and consistency.

PROGRAM

```
print("Comparative Analysis of Prompting Techniques")

print("\nZero-shot Prompting:")
print("AI enables machines to perform tasks that normally")
print("require human intelligence.")

print("\nOne-shot Prompting:")
print("Artificial Intelligence helps computers perform")
print("intelligent tasks, similar to the given example.")

print("\nFew-shot Prompting:")
print("AI allows machines to learn patterns, understand")
print("information, and solve problems using data.")

print("\nComparison:")
print("Zero-shot: Uses no examples.")
print("One-shot: Uses one example.")
print("Few-shot: Uses multiple examples.")
```

OUTPUT

```
print( AI enables machines to perform intelligent tasks. )

print("\nOne-shot Prompting:")
print("AI allows computers to learn and solve problems.")

print("\nFew-shot Prompting:")
print("AI helps machines perform tasks using data.")

print("\nComparison:")

Prompting Techniques Comparison

Zero-shot Prompting:
AI enables machines to perform intelligent tasks.

One-shot Prompting:
AI allows computers to learn and solve problems.

Few-shot Prompting:
AI helps machines perform tasks using data.

Comparison:
Zero-shot: Uses no examples.
One-shot: Uses one example.
Few-shot: Uses multiple examples.
```

RESULT

Thus, the zero-shot, one-shot, and few-shot prompting approaches were demonstrated and compared.
