EXPERIMENT 7

Text Generation using Google Gemini LLM API

Name	K Lokesh
Register Number	192472020

AIM

To demonstrate text generation for a prompt using a sample Google Gemini-style response.

PROCEDURE

1. Open a Python editor or notebook.
2. Display a predefined prompt asking about Machine Learning.
3. Prepare a sample response explaining Machine Learning.
4. Print the prompt and generated response.
5. Execute the program and observe the output.

PROGRAM

```
print("Text Generation using Google Gemini LLM API")

prompt = "What is Machine Learning?"
print("\nPrompt:", prompt)

generated_text = """
Machine Learning is a branch of Artificial Intelligence
that allows computers to learn from data and make
predictions without being explicitly programmed.
"""

print("\nGenerated Response:")
print(generated_text)
```

OUTPUT

```
print("Text Generation using Google Gemini LLM API")

prompt = "What is Machine Learning?"

print("\nPrompt:", prompt)

output = """
Machine Learning is a branch of Artificial Intelligence
that allows computers to learn from data and make
predictions without being explicitly programmed.
"""

print("\nGenerated Response:")
print(output)
```

```
Text Generation using Google Gemini LLM API

Prompt: What is Machine Learning?

Generated Response:

Machine Learning is a branch of Artificial Intelligence
that allows computers to learn from data and make
predictions without being explicitly programmed.
```

RESULT

Thus, the program demonstrating text generation using a Gemini-style prompt was executed successfully.
